

## Home Storage

### Tax Records, Insurance, Important Papers

**Fire Safes** are rated to withstand heat and are available in ratings from 15 minutes in a 500° fire up to 4 hours in a 1625° fire while keeping the interior temperature below 350°. These safes provide minimal burglary protection

### Stamp Collection

**Imported Fire safes** made with the dry clay method reduce moisture in the interior. Most are rated 1 hour to 2 hour. These safes provide minimal burglary protection

### Data Disks, Cassettes & CD Storage

**Data safes** are designed to protect from water, magnetic interference and fire. Various ratings are available depending on the amount of protection needed.

**Personal Valuables** - These safes come in two types – just Burglary, or Combination Burglary and Fire.

**Burglary Safes** are available in many sizes and levels of security protection. They are rated by the amount of resistance to penetration they provide. They provide no fire protection.

**Burglary & Fire Safes** are designed to provide both burglary and fire protection. Most of these types provide 1 hour fire protection and they are available in various levels of burglary protection. There is also a large selection of sizes and interiors to choose from. They are usually the best choice for the home.

**In-ground Safes** provide good security and fire protection, but require encasement in masonry. They usually are buried in a concrete floor although a form can be built and filled with wire reinforced concrete for above ground installation. In a fire the interior will probably get wet.

**Wall Safes** are designed to be installed in a wall. Many are designed to fit in either a standard 2” x 4” studded wall or a 6” wall. Larger sizes are usually installed in a masonry wall. They provide minimal burglary protection in a wood studded wall as they can be cut out of the studs and removed, but can be pretty secure and provide some fire protection in a masonry wall.

**Gun Safes** are manufactured as combination Fire-Burglary or just Burglary. They are available with interiors designed to hold guns, but with an all-shelf or jewelry storage interior make a roomy choice for general security.

**Pistol Boxes** are designed to secure a pistol away to prevent accidental use.

**Security Boxes** provide minimal security for small items.
